

JAVA SYLLABUS		
OBJECTIVE: The objective of the training session is to impart knowledge on Java programming to create multiple Digital Applications such as Mobie App, Desktop Apps, Web Applications, Web servers and application servers, Games, Database connection and much more. since java works is different platform such as Windows, Mac, Linux , Raspberry pi.. its much more efficient in most of the programming world		
Duration:		
S:NO	CONTENT	HOURS (L/P)
1	Introduction to Java	
	Course Overview	
	History and Features of Java	
	Setting Up the Development Environment (JDK, IDE)	
	Writing and Running Your First Java Program	
2	Basic Syntax and Structure	
	Java Program Structure	
	Variables and Data Types	
	Basic Input and Output (Scanner, System.out)	
	Operators (Arithmetic, Relational, Logical)	
3	Control Structures	
	Conditional Statements (if, if-else, nested if)	
	Switch Case	
	Loops (for, while, do-while)	
4	Object-Oriented Programming Concepts	
	Classes and Objects	
	Methods and Constructors	
	'this' Keyword	
	Method Overloading	
5	Inheritance and Polymorphism	
	Inheritance Basics	
	Method Overriding	
	Polymorphism (Compile-time and Run-time)	
	super Keyword	
6	Arrays and Strings	
	One-dimensional	
	Multi-dimensional Arrays	
7	Exception Handling	
	Introduction to Exceptions	
	Try, Catch, and Finally Blocks	
	Throw and Throws Keywords	
8	Packages and Access Modifiers	
	Defining and Using Packages	
	Access Modifiers (private, protected, public, default)	
	Importing Packages	
9	File Input and Output	
	File Handling Basics	
	Reading from and Writing to Files	
	Serialization and Deserialization
