

RHCSA SYLLABUS

OBJECTIVE: The Objective of this training session is to impart knowledge about the Core aspects of System Administrator and their proficiency in Linux. The training also includes various real-world scenarios in an environment that deploy Red Hat Enterprise Linux.

Duration		
S.NO	CONTENT	Hours (L/P)
1	Introduction	
	Accessing System and Obtaining Support	
	Edit text file from the shell prompt	
	Configuring SSH	
2	Navigating File System	
	Making files using command-line tool	
3	Managing Local User and Groups	
	Describing User and Group	
	Managing User and Group	
	Managing Password	
	Gaining Superuser Access	
4	Controlling Access to files	
	Managing file system permissions	
	Managing default permission and file access	
5	Managing SELinux Security	
	Changing the Selinux Enforcement Mode	
	Boolean	
6	Managing SELinux Security - Context	
	Context Type	
	Ports	
7	Tuning System Performance	
	Killing Processes	
	Monitoring Processes	
8	Tuning System Performance - Tuning	
	Adjusting Tuning Profile	
9	Scheduling Future Tasks	
	At Job	
	Cron Job	
10	Installing and Updating software Packages	
	Installing and updating software Packages with DNF	
	Enabling DNF repository	
11	Managing Basic Storage	
	Adding Partition, file system and mounting	
	Managing Swap Space	
12	Manage the storage Stacks	
	Creating Logical Volume	
	Extending Logical Volume	
13	Controlling services and the Boot Process	
	Identifying automatically started system process	
	controlling system services	
14	Root password Break	
	Selecting the boot target	
	Resetting the root password	

	Repairing file system issue at boot	
15	Analyzing and storing logs	
	Reviewing syslog files	
	Reviewing system journal entries	
16	Managing Networking	
	Validating network configuration	
	Configuring network from the command line	
	Editing network configuration files	
	Configuring names	
17	Accessing Network - Attached Storage	
	Managing network-attached storage with NFS	
18	Managing Network security	
	Managing Server Firewalls	
19	Running Containers	
	Deploy contrainers	
20	Running Containers- As a System Service	
	Manage Contrainer Storage and Network	
	Manage container storage and network resources	
	Managing contrainer as a service
